

eLite Basic Instruction Sheet

Main Unit

LED Sockets

Power Sockets

Connecting the LEDs and battery box and powering the unit:

The LED cable plugs and battery cable plugs are polarized so you can only plug them in one way. To connect a plug into a socket, align the plug tabs with the socket slots. Make sure the pins are aligned and press the plug into the socket. To remove the plug from the socket, gently pull the plug from the socket by the plug housing. Insert two AAA batteries into the battery box. Turn the unit on and off with the supplied switch on the battery box.

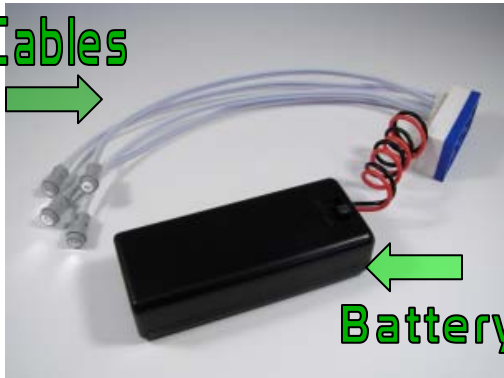

Special Note:

You can daisy chain units together by connecting an eLite extension cable from an unused power socket of the main unit to an unused power socket of an additional unit. Do not daisy chain more than four units together.

WARNING: Do not pull on the wires. Pulling on the wires could result in irreparable damage to the plug/wire connections.
